```
peration == "MIRROR X":
Lrror_mod.use_x = True
Lrror_mod.use_y = False
Lrror_mod.use_z = False
Operation == "MIRROR Y"
Lrror_mod.use_z = False
Lrror_mod.use_x = False
Irror_mod.use_x = False
Lrror_mod.use_x = False
Irror_mod.use_y = True
Irror_mod.use_z = False
```

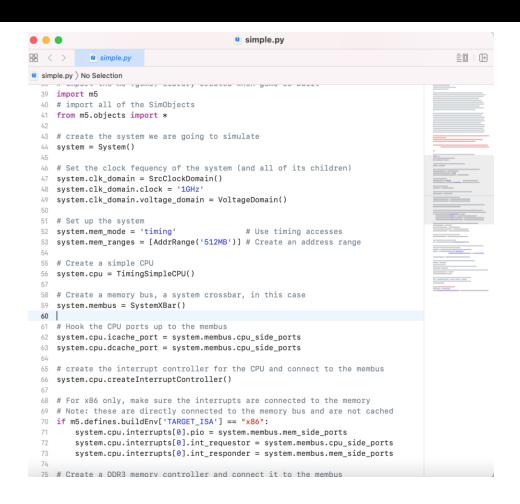

DEMOCRATIZING COMPUTER SCIENCE SIMULATION WITH A COMPONENTS LIBRARY

Presented by Bobby R. Bruce

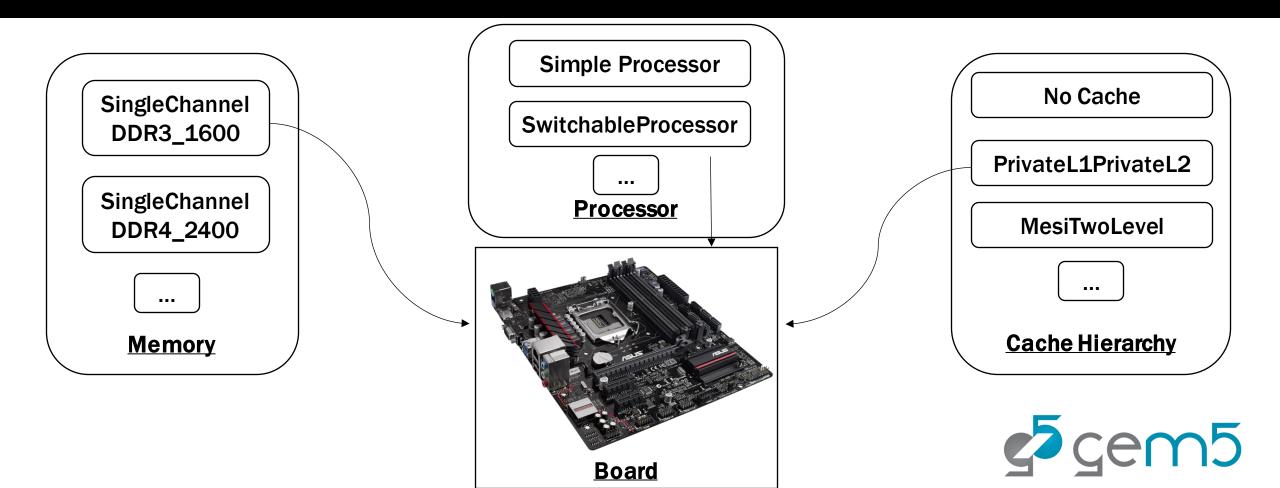

"HELLO WORLD" IN GEM5: PLENTY OF BOILERPLATE

- A single core setup connected directly to main memory, with no cache, requires 36 lines of Python!
- Many hundreds are required for a system capable of booting a modern OS.
- Unsupported scripts and examples are circulated in the community as many configurations do not vary between simulations.

SOLUTION: GEM5 COMPONENTS

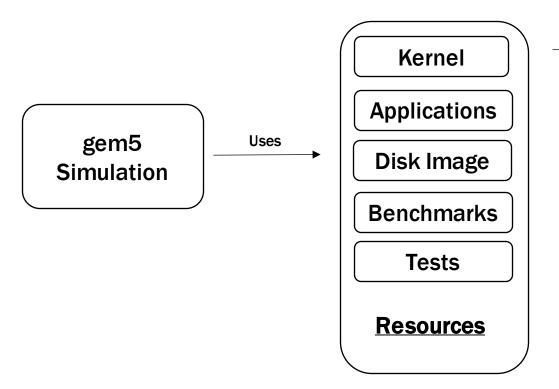

GEM5 COMPONENTS

```
gem5components.py
                                                                                                  gem5components.py
gem5components.py > No Selection
  1 from gem5.components.boards.x86_board import X86Board
  2 from gem5.components.memory.single_channel import SingleChannelDDR3_1600
  3 from gem5.components.processors.simple_processor import SimpleProcessor
     from gem5.components.cachehierarchies.classic.private_11_cache_hierarchy import (
         PrivateL1CacheHierarchy,
     from gem5.processors.cpu_types import CPUTypes
     memory = SingleChannelDDR3 1600(size="3GB")
     cache_hierarchy = PrivateL1CacheHierarchy(l1d_size="16kB", l1i_size="16kB")
     processor = SimpleProcessor(cpu_type=CPUTypes.TIMING, num_cores=4)
  12
     board = X86Board(
         clk_freq="3GHz",
         processor=processor,
         memory=memory,
  16
  17
         cache_hierarchy=cache_hierarchy,
  18 )
  19
     board.connect_things()
  21
```

AND, GEM5 RESOURCES!

Uses

```
resources.py

resource x86Board

resou
```

- gem5 resources contains pre-built resources for gem5 simulations.
- They may be automatically obtained via configuration scripts.

COMING SOON! "KNOWN GOOD CONFIGURATIONS"
